Task 2 – Akka streams

Sending LM-Proxy:

1. Serialization with Kryo to byte array
2. Create a stream Source<List<Byte>> on the array
   - Group Bytes into badges on the stream for a better transfer performance
3. SourceRef is send to the receiving proxy

Task 2 – Akka streams

Receiving LM-Proxy:

1. Create local Source on received SourceRef
2. Read stream and unfold grouped Bytes to byte array
3. Deserialize object with Kryo
4. Send object to receiving worker
